Bracketeer Dragster Story

Ed Quay started building dragsters in 1989 as another segment of our chassis business. We saw the dragster market as the next area of drag racing where growth would occur. The past 12 years have seen our dragster sales reach 136 cars. Basically that is building one car a month on a custom build basis. We build a car as you want it, not a “fits all” type.

When we began building dragsters we built a very fancy (high dollar) car that appealed to a limited clientele and they were very successful. As time went by we saw the need for a car that was more cost conscious, one that appealed to a greater segment of the racers wanting a dragster. The “Bracketeer” was born. The initial concept was to design a car that did not sacrifice quality in the quest to lower the price. We also wanted a car that was very easy to identify as an “ed Quay” car without asking. We accomplished both objectives. Some very bold decisions were made that allowed us to build the car quicker (less time involved translates into a lower price) and still give you, the customer, a high quality car. We started by applying the old axiom “KISS” (*Keep it simple stupid*). That’s exactly what we did, kept it simple so that the manufacturing process was much less time consuming. The chassis is as basic as it gets but one that still follows all of the SFI guidelines concerning safety and craftsmanship. The body is constructed of fiberglass, a tough resilient lightweight material that gave us great leeway in design and allowed for the “different look” of the “Bracketeer”. The driver compartment is user friendly with a “sit up” back angle and a low body so the driver can see what is occurring NOW!! If you want to win races you have to be able to see both the finish line and the other car.

From it’s debut in late 1995 this car started winning races and track championships. In 1996 and 1997 Santo Volpe won back to back track championships at one of the toughest tracks in the country, Maple Grove Raceway in Reading PA. 1998 saw Joe and Renee Cabets become the track champions at not one but two tracks in the same year, Numidia Raceway in central PA and Island Dragway in northern NJ. The winning continued in the year 2000 with Tony Gambardella winning the Atco NJ track championship and Mike Turocy winning the Maple Grove championship. Along the way edQuay himself built a “Bracketeer” and proceeded to win 2 NHRA Divisionals, one at Virginia Motorsports Park in 1997 and the other at Maple Grove in Reading PA in 1999. He also was runner-up at a race in the 5 day Moroso Bracket series in November 1998 and won numerous other races in his short driving career. Not only does he build them but he races too! The “Bracketeer” is a very successful race car design.
